

Nuvant, consistent with its mission and under a preventive approach, generates actions for the protection of the environment in all stages of the life cycle of its product; Committed to this, implements sustainability strategies aimed at complying with legal requirements, improving environmental performance, achieving its objectives and satisfying the needs of the interested parties.

In this sense, Nuvant guarantees sustainable development and concentrates its actions on the following strategies:

1. Implement the necessary systems and processes to continuously improve energy performance, including energy efficiency, use and consumption of energy, seeking to compensate the carbon footprint, reduce atmospheric emissions to achieve carbon neutrality with a tendency towards decarbonisation.
2. Manage the environmental risks associated with our operation, through the implementation of plans that contribute to the improvement of environmental performance, including efficient water management, responsible management of chemical substances, control of acoustic emissions, protection of biodiversity, animal welfare, land use and ecological restoration through forest compensation programs.
3. Implement circular economy strategies by executing waste valuation models, guaranteeing soil protection and pollution prevention.
4. Build bonds of trust with interested parties through constant communication and feedback.
